## Abstract

This document describes basic tools and elements of  $\text{\LaTeX}$  one needs to start working on a paper.  $\text{\LaTeX}$  fundamentals are described in the *Learn  $\text{\LaTeX}$  in 30 minutes* on Overleaf[3].

# 1 Tools

## 1.1 tex-live

You are going to need `tex-live` package to work with  $\text{\LaTeX}$ . `tex-live` is a multi-platform  $\text{\TeX}$ document production system [5]. It comes packed with various tools and you may use command line to compile your file. You can also use GUI tools like *TeXShop* (macOS), *Kile*[1] (multi-platform), *Texmaker* (multi-platform), or *LaTeX Workshop*[2] for *VS Code*.

```
sudo apt install tex-live
```

Listing 1: Installing tex-live

## 1.2 Kile

*Kile* is an IDE for  $\text{\LaTeX}$  that allows you to compile, convert, and preview your document.

```
sudo apt install kile
```

Listing 2: Installing Kile

## 1.3 LaTeX Workshop for VS Code

If you prefer *VS Code* to write code, install the *LaTeX Workshop* extension to write your  $\text{\LaTeX}$ , build (compile) it, and generate (preview) the resulting PDF.

## 1.4 Lucid chart

While professional tools like *OmniGraffle* (macOS) or *Visio* (Windows) are usually used to create diagrams, *Lucid chart*[4] should be sufficient for the purposes of this paper and it is free. You should not include photos in your paper but rather draw diagrams and generate charts<sup>1</sup>.

# 2 Structure

The main goal of this course is for you to write a scientific paper while using proper tools and methods. Your paper is going to be a survey/review of existing sources and should not exceed 7 pages.

---

<sup>1</sup>Use *Excel* or *Spreadsheets* for charts

Sections of the paper should include at least the following sections:

- Introduction
- History of the subject
- Prominent features
- Conclusion
- References

### 3 Timeline

You are expected to stick to the schedule specified on KATIE (see Table 1 in the Appendix).

## 4 Advanced elements

### 4.1 Math

Your paper may include mathematical formulas. They can appear *inline* (e.g.  $i^2 = -1$  or  $E = mc^2$ ) or in *display* mode.

$$F = G \frac{m_1 m_2}{r^2} \tag{1}$$

or

$$a^2 + b^2 = c^2$$

### 4.2 Code

An easy way to include code is to use package `listings` and have your code in a separate file. Other options (e.g. package `minted`) are acceptable too but may require additional tools.

```
1 def hello():  
2     print("Hello , Panda!")
```

Listing 3: `hello` from file

You can also include code in the body of your document.

```
def hello():  
    print("Hello , Panda")
```

Listing 4: `hello` inline and with different options

### 4.3 Image

An image (see Figure 1) or a chart can be inserted into the document.

Figure 1: Panda

### 4.4 Fancy text

Text `horizontal` horizontally. Text `vertical` vertically.

## Appendix A

| Task                                   | Week | Points |
|--|------|--------|
| L <sup>A</sup> T <sub>E</sub> Xseminar | 1    | 5      |
| Select a topic                         | 1    | 10     |
| Meet the librarian                     | 2    | 5      |
| Identify the sources                   | 2    | 10     |
| Outline                                | 3    | 10     |
| First draft                            | 4    | 20     |
| Meet the instructor                    | 5    | 0      |
| Final draft                            | 7    | 20     |
| Presentation                           | 8    | 10     |
| Full paper                             | 8    | 10     |
